

HANA Production Notification

The Office of the Chief Financial Officer will be implementing a high speed, in-memory database reporting technology called HANA on Monday, April 8, 2013. HANA will provide accelerated real time processing of reports against ECC data and will be available via the FMMI Portal. HANA reports will run in a fraction of the time that the current ECC reports run. The HANA version of the Status of Funds Report and Trial Balance reports will also allow unprecedented drill down capability to the source document in ECC to further analyze the data.

Business Objects (BOBJ) is the reporting tool that will be used to execute the reports against the HANA data source. The initial HANA roll out will deliver high speed versions of the following ECC reports:

- Federal Transaction Register Report
- Budget Availability Control
- Status of Funds Report SPL

The Federal Transaction Register report will be located under the General Ledger Management tab. The Budget Availability Control and Status of Funds reports will be located under the Funds Management tab.

A subsequent HANA release of the Trial Balance Report will follow in the next few weeks.

If you currently have access to run the ECC version of the reports and you have BOBJ access, then you will have access to run the reports. If you do not have access to run the ECC version of these reports or BOBJ access, then the following roles should be requested. New BOBJ access will be granted up to the established number of BOBJ licenses for your agency.
